Overview

what we're all about

Who We Are

Based in Redmond, WA, we are a tight-knit software development team with over 20 years of combined experience crafting business intelligence and software solutions. Building on our solid foundation in Agile methodologies, we can take your project from concept to completion.

What We Do

We offer customized software solutions. With clients in IT, healthcare, law, and higher education, we are equipped to handle a wide range of specialized software needs. Our expertise includes SSIS & SSRS management, application development, SharePoint portal creation, graphic design, and user experience design.

We're multitasked. Our developers juggle the complex requirements of databases, web and mobile applications, e-commerce, and more every day.

dojo, ExtJS, jQuery, YUI, mootools
and original frameworks)
REST
WebDAV, SSL, HTTPS, TLS,
OpenSSL
Adobe Flash

XML

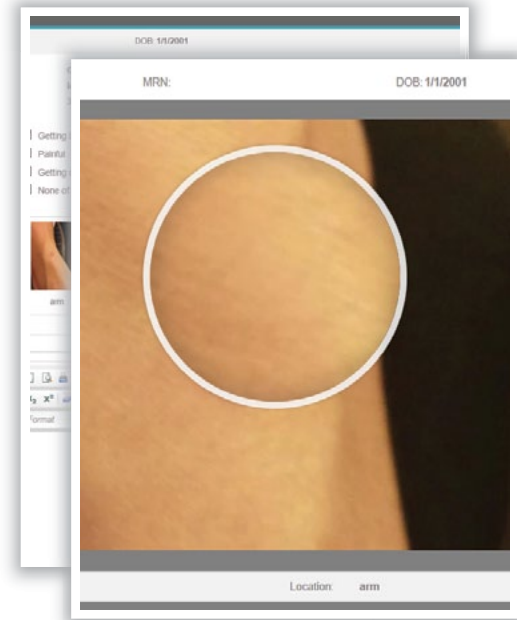

XML / XSL / XSLT, DOM

Application Development from concept to completion

Whether you're searching for an e-commerce solution to expand with your growing business or looking to manage projects with hundreds of employees, our developers can help. We take you through the application development process from concept to completion, ensuring that the final product is perfectly tailored to suit your needs.

This custom-built healthcare portal incorporates database management, reporting and diagnosis, patient information, and electronic payment in a single ecosystem. .NET authentication and multiple firewalls keep sensitive information private while connecting healthcare practitioners with their clients.

SharePoint Portals

work better, together

Everything runs more smoothly when your team stays connected in real time. We leverage the power of SharePoint to create feature-rich, interactive collaboration and content management tools for businesses of every size.

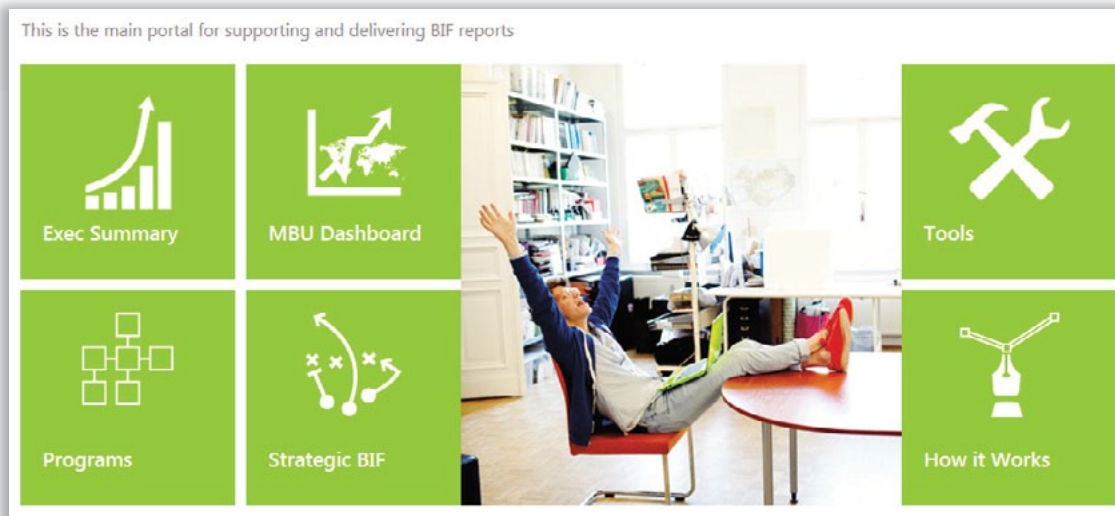

Our portfolio includes a variety of SharePoint collaboration portals with customized functions, including document management, optimized report generation, help desk tools, and more.

SSIS & SSRS Management

business intelligence at your fingertips

Your management team needs the latest data in an accessible, centralized location. We design live scorecards, dashboards, and interactive business intelligence (BI) packages that collect and display mission-critical information and key performance indicators (KPIs).

We created this customized business intelligence portal using ASP.NET, Microsoft SQL Server, and Office 365 Cloud Services. With this solution, company executives have access to robust data integration, reporting, and visualization of critical information.

Graphic Design & UX

make a lasting impression

Make every first impression unforgettable and showcase your work with the design it deserves. We craft high-quality design solutions for web, print, and mobile, and optimize the user experience online.

Our all-inclusive USB business card design package provides striking business cards with a surprise - up to 16 GB of storage in a hidden USB drive. Maximize your networking advantage by including a product catalog, service portfolio, or even video content!
